Agastache Poquito Collection

Capturing my attention last summer were the bushy and brightly colored plumes of Poquito Butter Yellow, Dark Blue, Lavender, and Orange agastache, also known as anise hyssop or hummingbird mint. I imagined dotting these low, dwarf, compact, and long-blooming plants along the front of our perennial border at the beginning of the season.

Fast-growing agastache are wonderful weavers and all-season bloomers. They will serve as bright spots when perennials go in and out of bloom throughout the summer, much to the delight of both the gardener and hungry pollinators like hummingbirds, butterflies and bees. Agastache are low maintenance and drought tolerant once established.

Height: 10-15 inches. **Width:** 14-15 inches. **Light:** Full sun. **Zone:** 5.
